Passport: S7802339 | **Date of birth:** 25 Mar 2003 | **Phone number:** (+91) 9622142108 (Mobile) | **Email address:** abhayv175@gmail.com | **Website:** <https://abhayv175.netlify.app> |

Address: VPO Gurah kilyal, teh Ramkot, 184203, Kathua, Jammu and Kashmir, India (Home)

● ABOUT ME

Software Engineer with 2+ years of experience in test engineering across mobile, network, and software domains. Proven expertise in device and network log analysis (QXDM, QCAT, ADB), 5G/VoLTE protocol testing, and automated test case development. Experienced in working with major OEMs and cross-functional teams including chipset vendors and carrier partners. Strong background in software development (React, Python, C#) enabling effective collaboration with development teams and deep technical root cause analysis.

● EDUCATION AND TRAINING

SEP 2020 Vilnius, Lithuania

BACHELOR'S IN INFORMATION TECHNOLOGY Vilnius Tech

Field of study Information Technologies

● WORK EXPERIENCE

TEST ENGINEER – MARQUISTECH – Dec 2025 – Sep 2026 – REMOTE, INDIA

- Capture device and network logs (QXDM, QCAT, ADB) to identify modem, RF, and protocol-level issues in unreleased mobile phones for major OEMs
- Reproduce and validate network-related problems including attach failures, handover issues, throughput drops, and IMS/VoLTE/5G NR anomalies for accurate root-cause analysis.
- Document findings with detailed logs, reproduction steps, KPIs (RSRP/RSRQ/SINR), and impact assessment for engineering review.
- Share structured reports and issue summaries with OEM, chipset, and carrier teams to support debugging, software updates, and acceptance testing.

JUNIOR TEST ENGINEER – UNITY – Nov 2024 – Apr 2025 – VILNIUS, LITHUANIA

- Identified, documented, and tracked bugs to resolution, ensuring efficient communication with customers and developers with a weekly target of 20 cases
- Designed, executed, and maintained automated and manual test cases for various software components and environments including IL2CPP, DOMS, and other relevant systems cases
- Stayed current with industry trends and emerging technologies to continuously refine testing methodologies and enhance tools, including ad-hoc and exploratory approaches
- Identified regressed versions of software and provided initial fixes or workarounds for critical issues
- Working on managing a QA lab with a diverse range of devices and machines, ensuring seamless testing operations and enabling secure remote access for distributed teams and developed internal FTP servers for Unity's internal workflows

● SKILLS

QA Skills

API Testing | cross platform testing | Regression | structured debugging | Jira

Software Development

Mongo DB | SQL | UI/UX | Next JS | React JS | REST API

Programming languages

C++ | C# | JavaScript | Python

Additional Skills

Version Control | Linux | Custom Operating Systems | Android Studio

● **PROJECTS**

Passender Messenger

This web application is a modern messenger clone built using a robust tech stack, including TypeScript, React, Next.js, and NextAuth for authentication. It leverages Cloudinary for media storage and handling, Pusher for real-time updates, and MongoDB as its database.

Move IT

Move It is your go-to courier service, featuring a sleek website built with HTML, CSS, and JavaScript for seamless navigation. Easily schedule pickups, track shipments, and explore our reliable services. Trust Move It to deliver your packages swiftly and securely.

Link <https://abhayv175.github.io/MOVE-IT/>

Banking Application

Developed a banking application using JavaFX, Scene Builder, and CSS. The application features an intuitive user interface designed in Scene Builder and enhanced with custom CSS styling. It supports a variety of banking operations to ensure a seamless user experience.

Link https://github.com/abhayv175/Bank_Application

Greek Vocabulary Application

Built with Flutter and Dart, this application helps users learn Greek vocabulary for travel and food. It uses local on-device storage with SQLite and JSON to track tasks and learning progress, with future plans to integrate a server-side backend.

Pika panic

Pika Panic is an engaging game built with Unity, featuring dynamic gameplay and immersive visuals. Developed using Unity Version Control (Plastic SCM), the project demonstrates efficient team collaboration and asset management. With unique levels inspired by real-world locations—such as the Unity Vilnius office and university campuses—it blends technical precision with creative storytelling for a captivating player experience.
